

# X FORGED CB

With the new X Forged CB irons, the goal was simple: provide consistency, control, amazing feel and a stunning design to the most discerning of golfers. Typical irons in this category are single piece, but Callaway took a different approach. We enhanced the player's performance iron with multi-material construction using weighting, face technology, and shaping to create an iron worthy of the X Forged name.

## FEATURES & BENEFITS

### Precise Control From Multi-Material Construction

These irons are engineered with custom internal and external MIM'd tungsten weighting. The tungsten in the toe aligns the CG precisely behind the middle of the club, while the external tungsten allows us to precisely dial in swingweight while keeping the CG centered.

### Signature Soft Feel

The X Forged CB creates incredibly soft feel from a forged 1025 mild carbon steel body.

### Spin And Distance Consistency

Our Tour Tuned Face Plate provides speed while promoting Tour-level spin consistency across the face.

### Players' Shaping

The blade length, topline and offset are all designed to promote pinpoint shot-making and more workability through the set.

### Premium Components

The Project X IO is individually optimized for each iron in the set. The Mitsubishi MMT is a player's graphite shaft with metal mesh in the tip for stability. Golf Pride's Z Grip features a firm feel and exceptional traction.
